SUDHARSANAN D

Flutter Developer | Mobile & Web Application Developer

PORTFOLIO: sudhar-portfolio-cqah.onrender.com
LINKEDIN: linkedin.com/in/sudharsanan-dinakaran

TECHNICAL SKILLS

FRAMEWORK & LANGUAGES
Flutter, Dart

ARCHITECTURE & STATE
Stacked MVVM, Provider, GetX

BACKEND & CLOUD
Firebase, Firebase Cloud Messaging, REST APIs

MESSAGING & ALERTS
Push Notifications

TOOLS & VERSION CONTROL
Git, GitHub

TARGET PLATFORMS
Android, iOS, Flutter Web

DEPLOYMENT CHANNELS
Google Play Store, Apple App Store, Web Deployment

KEY DEVELOPMENT AREAS

- Cross-platform mobile app development
- Flutter Web development & compilation
- REST API & backend service integration
- Firebase cloud suite implementation
- Push notification architecture (FCM)
- Reactive state management (Provider/GetX)
- Stacked MVVM modular architecture
- Responsive UI & custom widget trees
- App debugging & device troubleshooting
- Version control workflows via Git/GitHub
- Android & iOS release management
- Web application hosting & deployment

PLATFORMS & DEPLOYMENT

Android Publishing: Google Play Console, app bundles (.aab), keystore signing, and testing tracks.

iOS Publishing: Apple App Store Connect, TestFlight distribution, certificates, and provisioning profiles.

Web Deployment: Flutter Web build compilation, asset optimization, and live web server hosting.

EDUCATION

B.Sc. Computer Science
SNMV College of Arts and Science
2014 – 2017

PROFESSIONAL SUMMARY

Flutter Developer with 3.5+ years of professional experience in developing and maintaining cross-platform mobile and web applications. Experienced in Flutter, Dart, Firebase, REST API integration, push notifications, state management, Stacked MVVM architecture, Provider, GetX, Git/GitHub, and application deployment across Android, iOS, and Flutter Web.

PROFESSIONAL EXPERIENCE

Flutter Developer • Rank You Higher — 2025 – Present

- Develop and maintain Flutter-based mobile and web applications with scalable codebases.
- Build responsive, adaptive, and reusable UI components across different screen sizes.
- Integrate REST APIs and backend services with structured error handling and parsing.
- Implement applications using Stacked MVVM architecture for clean separation of concerns.
- Integrate Firebase cloud services, push notifications, and FCM messaging handlers.
- Work with Provider and GetX state management for predictable, reactive UI updates.
- Debug and resolve application issues across Android and iOS real devices.
- Build and deploy Android, iOS, and Flutter Web applications to distribution tracks.
- Use Git and GitHub for version control, code reviews, and team collaboration.

Flutter Developer • Probe'seven Better Lives — 2024 – 2025

Supply Chain Management Web Application (Flutter Product)

- Developed and maintained a production-grade Flutter Web application for supply chain management.
- Built responsive and reusable web UI components for different business workflows.
- Integrated REST APIs to communicate with backend services and manage application data.
- Implemented application screens, forms, validations, navigation, and user interactions.
- Worked with state management and structured application architecture.
- Integrated Firebase services where required.
- Implemented and maintained application features based on evolving product requirements.
- Debugged and resolved functional and UI issues across different browsers and screen sizes.
- Worked with Git and GitHub for version control and collaborative development.
- Participated in testing, bug fixing, build generation, and web application deployment.
- Worked as part of a product development team to continuously enhance the supply chain management platform.

Flutter Developer • Shanmara Solutions — 2023 – 2024

- Developed mobile applications using Flutter and Dart programming standards.
- Designed responsive user interfaces and modular, reusable widgets.
- Integrated APIs and Firebase services for essential data exchange and storage.
- Implemented navigation, forms, validation, and dynamic user interactions.
- Used Git and GitHub for source code management and branch tracking.
- Performed application testing, debugging, and release build generation.

DEVELOPMENT PRACTICES

Version Control & Collaboration: Structured Git branching, commit conventions, pull request workflows, and repository management via GitHub.

API Integration & Networking: Clean HTTP service layers, JSON serialization/deserialization, response validation, and reliable error recovery.

Responsive UI Engineering: Scalable widget trees, flexible layouts, orientation adaptation, and pixel-accurate cross-screen rendering.

Debugging & Maintenance: DevTools profiling, breakpoint debugging, stack trace analysis, and memory/rendering optimization.

Build & Release Management: Gradle configuration, Xcode scheme setup, release keystores, and streamlined deployment pipelines.
